DESIGN SYSTEM

Clinical interface

Tokens, components, and the chart layout for a fictional patient record. Designers use the roles below. Developers compose the same pieces in Storybook.

Record

Jordan Hale, 65. Not a real patient, clinician, or product.

Structure

Foundations, atoms, molecules, organisms, one template, two pages.

Type

Inter. Color pairs meet WCAG AA for text.

01

How it is built

Each level only knows the level under it. The template owns the grid. The page decides which view fills the middle column.

LEVEL	JOB	PIECES
Foundations	Color, type, space, radius, shadow	CSS variables on `:root`
Atoms	One control, no layout opinions	Icon, icon button, count, tab, button, chip, status, text controls
Molecules	Atoms with one job	Field, choice, lab metric, timeline item
Organisms	A section of the chart	Patient record, diagnosis timeline, assessment form, clinical results
Template	Three slots and the small-screen switch	Chart
Pages	One record, one view	Dashboard, assessment

One primary button in a region. It is the next step, such as Start assessment or Publish. Secondary saves a draft. Ghost leaves the flow. A chip names a fact. A status names where an assessment is. Do not use one as the other.

02

Color

Meaning is fixed. A falling LDL-C is good. A falling eGFR is attention. A steady potassium stays neutral. Do not recolor a value because the arrow points up.

Surfaces

Canvas
`--color-bg-canvas`
`#f8fafc`

Surface
`--color-bg-surface`
`#ffffff`

Subtle
`--color-bg-subtle`
`#e2e8f0`

Border
`--color-border-default`
`#f1f5f9`

Text

Primary
`--color-text-primary`
`#0f172a`

Heading
`Clinical titles`
`#1e293b`

Strong
`--color-text-strong`
`#334155`

Secondary
`--color-text-secondary`
`#64748b`

Brand and clinical meaning

Brand
`--color-bg-brand`
`#2563eb`
	Brand subtle
	`--color-bg-brand-subtle`
	`#eff6ff`
		Success
		`--color-text-success`
		`#15803d`
			Success subtle
			`--color-bg-success-subtle`
			`#dcfce7`

Warning
`--color-text-warning`
`#a16207`
	Warning subtle
	`--color-bg-warning-subtle`
	`#fef9c3`
		Danger
		`--color-text-danger`
		`#b91c1c`
			Danger subtle
			`--color-bg-danger-subtle`
			`#ffe4e6`

Text on its background meets 4.5:1. White on brand blue passes. White on the published green passes. Amber on the yellow tile passes. A lighter green, yellow, or gray from the source look is used only when that pair passes. Otherwise the next darker step is the token.

03

Type

Inter. Use the role. Section titles stay smaller than the patient name and the numbers.

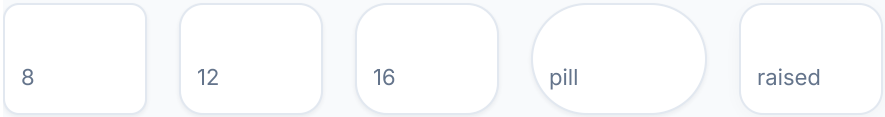

Patient name 20 / 28 · 700	**Jordan Hale**
Title 22 / 26 · 700	**Assessment**
Section 14 / 20 · 500	Latest diagnoses
Body 14 / 20 · 400	Symptoms progressed over six weeks. No chest pain at rest.
Lab value 14 / 18 · 700	**2.1** mmol/L
Lab label 9 · 500 · upper	LDL-C
Caption 12 / 16 · 400	Friday, June 4, 2021

Space

4 8 12 16 24 32

Radius and elevation

Cards use a 12px radius and a hairline border. The patient column uses 16px. Buttons, chips, and status are pills, except the secondary button, which uses an 8px radius.

04

Atoms

Import the atom. Do not restyle it in the parent.

Button

`Button`

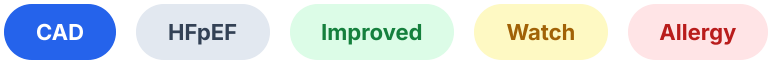

Primary is the next step. Secondary saves. Ghost leaves. An optional icon sits before the label.

Chip

`Chip`

A fact: diagnosis, risk, or medication. The first item in a group is brand. The rest are neutral.

Status

`Status`

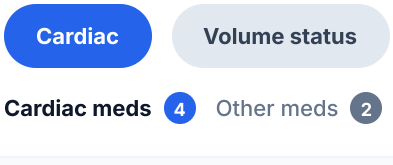

Writes its own label. The icon repeats the words and is hidden from assistive technology.

Tab

`Tab`

Pill for exam sections. Text for medication lists, with a count.

Icon button

`IconButton`

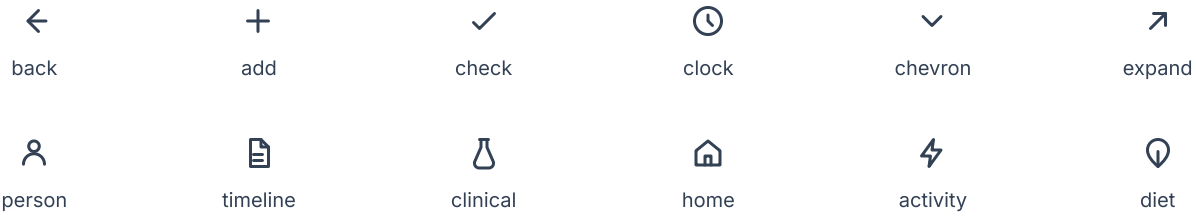

The label is required and becomes the accessible name.

Icons

`Icon`

24 viewBox, 2px stroke, hidden from assistive technology. Name the control, not the picture.

Text controls

`TextInput · Select · TextArea`

Text input, select, and text area. The field molecule supplies the label.

Worsening dyspnea, NYHA class III

NYHA class III

05

Molecules

A molecule has one job. It does not navigate between the dashboard and the form.

Field

`Field`

Label, control, and either a hint or an error. The error replaces the hint.

Clinical note

Visible to the care team after publish.

Visible to the care team after publish.

Title

Required

Add a title before publish.

Choice

`Choice`

A check the clinician can toggle. Checked uses the brand tint.

- [x] Repeat NT-proBNP
- [x] Transthoracic echo
- [ ] CBC

Lab metric

LabMetric

Value, unit, and delta. Intent is clinical meaning. The sparkline is decorative.

Timeline item

TimelineItem

Current is the open draft. Done is a published study. The dot follows the state.

06

Chart

The template measures its own width. Wide screens show three columns. Narrow screens show one section at a time.

Patient	Work	Clinical
320px	Centered, up to 600px	384px
Identity, history, risks, medications	Timeline on the dashboard. The form during an assessment.	Exam, labs, ECG, echo, cath

WIDTH	WHAT CHANGES
1041px and up	Three columns. Gap and page padding are 24px. The bottom bar is hidden.
1040px and under	One section. The timeline is the default. A fixed bar switches Patient, Timeline, and Clinical.
720px and under	Form actions stack and take the full width.

Result cards carry an expand mark in the top right. It is decorative. The patient column does not. Section titles for exam, labs, ECG, echo, and cath sit above their cards.

Accessibility

RULE	HOW IT IS MET
Name	Icon buttons require a label. Status writes “In progress” or “Published”. Choices and fields have visible labels.
Focus	2px brand outline, 2px offset, on buttons, tabs, fields, choices, and the section bar.
Landmarks	Patient and clinical results are labeled regions. The section bar is a navigation landmark.
Not color alone	Lab intent includes the signed delta. Status includes the word and a decorative icon.
Check	Every story runs axe. A failure blocks the story. The region rule is the only one turned off, because Storybook’s canvas is not a page landmark.
